

Universal Cover Plate Door Saver

Installing on existing doors? Did you know that you might need a Universal Cover Plate Door Saver?

CARDLOCK 1000/1100 SERIES DOOR CUTOUT PATTERN

WILL YOU NEED A UNIVERSAL COVER PLATE DOOR SAVER?

If you currently have an electronic lock, most door cutout patterns will be different from vendor to vendor. You must refer to BeLine's manufacturing template to determine if the Cardlock will cover the holes on your door. Obtain this document from BeLine. BeLine can also help you to determine this if you provide the model of the lock you are currently using.

If you do not currently have an electronic lock but have a deadbolt and cylindrical lock set then the Cardlock may not always cover those holes. Industry standard spaced holes can be covered by the Cardlock without using the Universal Cover Plate. For older doors you may find that the spacing between the deadbolt and lock set are not standard, uniform when compared to the other doors, or spaced too far apart. In that case, the Universal Cover Plate will mostly likely be required. Ask BeLine for the measurement form.

ADVANTAGES OF USING A UNIVERSAL COVER PLATE

- Guaranteed to hide holes or gaps
- Strengthens the door. When doors are cut too many times the door becomes weak
- Attractively matches the Cardlock
- When used with BeLine weather proofing kit the edges of the door lock become water tight
